

Miscellaneous Record Scanning

We are working with the same vendor, Cott, who scanned and is getting the information indexed to be available online for the Auditor/Recorder 1,000 plus books. Cott will create the various types of documents with the proper index fields for us to index. Marshall County will be doing the scanning and doing the indexing of the records. Cott has given us a high-level estimate plus our estimate from James Nehring for pulling data from legacy systems. We are estimating \$50,000, for all the expenditures for vendors. This does not include the costs of our personnel scanning the documents.
